WILLIAM SESSIONS

313-431-3151 | williamsessions1243@gmail.com | LinkedIn | Sales Engineering Portfolio | GitHub

Founding Sales Engineer with 10+ years of experience across customer-facing technical roles, solution design, integrations, and technical enablement. Built scalable presales processes, developed AI-assisted evaluation workflows, and partnered with Product and Engineering to translate customer needs into technical solutions. Combines hands-on API expertise with organizational leadership and measurable improvements in sales effectiveness.

CORE SKILLS

Presales & Solutions Discovery, requirements gathering, solution architecture, POCs, technical validation, demonstrations, RFI/RFPs

APIs & Integrations REST APIs, JSON, Postman, authentication, schema validation, identity resolution, data ingestion, troubleshooting

AI & Automation LLM applications, AI-assisted requirements evaluation, workflow automation, n8n, OpenAI API, Claude

Platforms & Tools Jira, Confluence, Zendesk, Supabase, Next.js, TypeScript, GA4, GTM, DV360, Amazon DSP, Meta, LinkedIn

PROFESSIONAL EXPERIENCE

PulsePoint | Founding Sales Engineer, Programmatic | September 2022 – Present

- Designed and implemented a standardized Jira intake process for discovery, POC, and demo requests across Sales and Account Management; associated with 15% higher win rates and 10% faster time to close.
- Developed AI-assisted RFI/RFP evaluation workflows supporting 25+ evaluations, automating approximately 70% of the evaluation process and reducing initial response and discovery preparation from about two weeks to days.
- Created 10 technical sales playbooks used across the Sales organization to support launches, qualification, positioning, and demonstrations of emerging automation, API, and AI-powered products.
- Served as the Founding Sales Engineer, establishing scalable presales processes, technical enablement resources, and cross-functional workflows while supporting the full customer portfolio.
- Established voice-of-customer feedback loops with Product and Engineering, influencing enhancements to Next Best Action campaign capabilities and the scalability of social advertising offerings.
- Lead technical discovery, customized demonstrations, solution design, and POCs, translating customer requirements into technical recommendations and validation plans.
- Advise on REST API integrations, authentication, automated data ingestion, identity resolution, and activation workflows; troubleshoot implementation challenges with customers and internal teams.

Innovid | Associate Director, Client Support – Self Service | July 2021 – August 2022

- Led global technical support operations across onshore and offshore teams, guiding complex enterprise troubleshooting and escalations.
- Built customer onboarding programs, LMS training, and technical documentation to support adoption of a self-service platform.
- Provided technical demonstrations and solution recommendations; translated insights from customer interactions into product improvements.

Innovid | Client Support Team Lead – Self Service | October 2019 – June 2021

- Delivered 100+ product walkthroughs and technical demos, partnering with Sales on customer onboarding and expansion opportunities.
- Designed discovery and onboarding workflows and developed self-service resources that reduced reliance on support.

Innovid | Senior Technical Account Manager | July 2017 – September 2019

- Owned technical escalations, measurement integrations, and trafficking troubleshooting in partnership with Engineering.
- Implemented workflow improvements that reduced trafficking time by 30% and error rates by 25%.

Amnet (Dentsu) | Associate Director | April 2016 – July 2017

- Led agency relationships and account teams, including direct reports, while managing monthly programmatic budgets exceeding $1M.

Amnet (Dentsu) | Senior Account Manager | April 2014 – March 2016

- Managed Chevrolet programmatic initiatives and developed data-driven strategies that expanded GM investment in programmatic advertising.

Doner | Trading Desk Manager | February 2013 – April 2014

- Managed tagging, pixel QA, trafficking, and optimization across 10+ clients; developed internal technical training resources.

Self-Employed | Professional Online Poker Player | 2008 – 2013

- Built a 17-cent starting bankroll into six figures through competitive online poker, later playing professionally, coaching other players, and staking World Series of Poker participants.

SELECTED TECHNICAL PROJECTS

AI Sales Engineer Copilot Built a fictional-product requirements evaluation prototype using Next.js, the OpenAI API, and documentation retrieval to identify solution fit, risks, and discovery questions.

SignalBridge Integration Lab Built a fictional REST API integration lab demonstrating bearer-token authentication, CRUD operations, JSON validation, persistence with Supabase, and structured error handling.
